Conference: Measuring Impact of Higher Education for Development

Description

Tweet

From: Monday 19th March 2012 to Tuesday 20th March 2012

Venue: Birkbeck College, Malet Street, London

Organisers: London International Development Centre (LIDC); Association of Commonwealth Universities (ACU)

Background: Higher education for international development has been, in recent years, a neglected area relative to other educational interventions. Yet higher education (HE) is necessary for the attainment of Millennium Development Goals (MDGs) and for economic development in low and middle income countries.

There is a long history of development assistance interventions in HE to support development goals, directed at strengthening individual, organisational and institutional capacity. These have included scholarship programmes as well as support to specific universities and university networks in low and middle income countries, and support to academic research and training partnerships.
However, there has been little comparison of these different interventions in terms of their international development impact. This limits our understanding of â??what worksâ?• in HE interventions for development, and our ability to invest effectively in future.
The aim of this two-day international conference is to examine the current status of impact evaluation for HE interventions and to identify research gaps and needs for the future. The conference will focus on three issues:

- What has been, and should be, the development intention of HE interventions?
- How should development impacts be measured?
- What is our experience with measurement methods and tools to date, where are the gaps and what research priorities emerge?

The programme will be posted online soon.

Who should attend:

The conference will bring together experts from three research sectors: higher education, international development and impact evaluation from academia, think tanks, government agencies and civil society organisations. PhD students are welcome if their research is relevant to the theme of the conference.

Registration is open between 2 February and 5 March 2012.
To register, please fill in and return the registration form.
Attendance is free of charge.
