Workshop: Designing and Building a Results-Based Monitoring and Evaluation System

Description

Tweet

Date: Sunday 23-May-10 09:00 AM till: Thursday 27-May-10 05:00 PM
Venue: Amman, Jordan

Join us in Amman, Jordan for a 5-days training workshop in designing and building a results-based M&E system. The course is organized by the Jordan Education Initiative (JEI) and will heavily depend on the material developed in conjunction with International Program for Development Evaluation Training (IPDET) and the Independent Evaluation Group of the World Bank.

Combining both attention to M&E theory and practical applications of the theory, the 40-45 participants completing the course will gain knowledge and experience on how to design a results-based M&E system, understand the M&E tools, techniques, and resources needed for planning, organizing, and/or managing programs and projects. The course provides an overview of the theoretical foundations of M&E methods, as well as ample opportunities for practical application of these methods through case studies, course exercises, and group projects. The discussions will be practical and hands on. Participants will work in teams, discuss problem scenarios, share experiences, and develop M&E tools that they can apply in their own jobs following the course.
