

THE MODEL THINKER What You Need to Know to Make Data Work for You

Description

by Scott E. Page. Published by [Basic Books](#), 2018

[Tweet](#)

[Book review by Carol Wells](#) • Page proposes a “many-model paradigm,” where we apply several mathematical models to a single problem. The idea is to replicate “the wisdom of the crowd” which, in groups like juries, has shown us that input from many sources tends to be more accurate, complete, and nuanced than input from a single source •

Contents:

- Chapter 1 • The Many-Model Thinker
- Chapter 2 • Why Model?
- Chapter 3 • The Science of Many Models
- Chapter 4 • Modeling Human Actors
- Chapter 5 • Normal Distributions: The Bell Curve
- Chapter 6 • Power-Law Distributions: Long Tails
- Chapter 7 • Linear Models
- Chapter 8 • Concavity and Convexity
- Chapter 9 • Models of Value and Power
- Chapter 10 • Network Models
- Chapter 11 • Broadcast, Diffusion, and Contagion
- Chapter 12 • Entropy: Modeling Uncertainty
- Chapter 13 • Random Walks
- Chapter 14 • Path Dependence
- Chapter 15 • Local Interaction Models
- Chapter 16 • Lyapunov Functions and Equilibria
- Chapter 17 • Markov Models
- Chapter 18 • Systems Dynamics Models
- Chapter 19 • Threshold Models with Feedbacks
- Chapter 20 • Spatial and Hedonic Choice
- Chapter 21 • Game Theory Models Times Three
- Chapter 22 • Models of Cooperation
- Chapter 23 • Collective Action Problems
- Chapter 24 • Mechanism Design
- Chapter 25 • Signaling Models
- Chapter 26 • Models of Learning
- Chapter 27 • Multi-Armed Bandit Problems
- Chapter 28 • Rugged-Landscape Models
- Chapter 29 • Opioids, Inequality, and Humility

From his Coursera course, which the book builds on: “We live in a complex world with diverse people, firms, and governments whose behaviors aggregate to produce novel, unexpected phenomena. We see political uprisings, market crashes, and a never-ending array of social trends. How do we make sense of it? Models. Evidence shows that people who think with models consistently outperform those who don’t. And, moreover, people who think with lots of models outperform people who use only one. Why do models make us better thinkers? Models help us to better organize information “ to make sense of that fire hose or hairball of data (choose your metaphor) available on the Internet. Models improve our abilities to make accurate forecasts. They help us make better decisions and adopt more effective strategies. They even can improve our ability to design institutions and procedures. In this class, I present a starter kit of models: I start with models of tipping points. I move on to cover models explain the wisdom of crowds, models that show why some countries are rich and some are poor, and models that help unpack the strategic decisions of firm and politicians. The models covered in this class provide a foundation for future social science classes, whether they be in economics, political science, business, or sociology. Mastering this material will give you a huge leg up in advanced courses. They also help you in life. Here’s how the course will work. For each model, I present a short, easily digestible overview lecture. Then, I’ll dig deeper. I’ll go into the technical details of the model. Those technical lectures won’t require calculus but be prepared for some algebra. For all the lectures, I’ll offer some questions and we’ll have quizzes and even a final exam. If you decide to do the deep dive, and take all the quizzes and the exam, you’ll receive a Course Certificate. If you just decide to follow along for the introductory lectures to gain some exposure that’s fine too. It’s all free. And it’s all here to help make you a better thinker!”•
